How the system fits together

CoreLink is one connected platform with three apps and a set of guest-facing screens. Everything updates in **real time** — a change made on Control appears on the TV screens and in Admin within a second.

Control

Operators run each attraction — queue times, dispatching groups, status.

Sign-Off

Supervisors complete opening & closing safety checks on iPads.

Admin

Managers oversee the whole park, screens, reports & incidents.

Getting in

- 1 Open the site and you'll land on the **sign-in** page. Enter your email and password.
- 2 You arrive at the **landing page** — tap the app you need (Control, Sign-Off, or Admin).
- 3 Switch apps anytime using the **logo menu** in the top-left of any app.

Running an attraction

Control is where operators manage a single attraction on a phone or tablet. **You must log in as the operator before you can dispatch or change the queue.**

1 · Take the panel

- 1 Select your attraction from the tabs at the top.
- 2 The panel is **locked** until an operator signs in. Tap **"Enter PIN to operate"**.
- 3 Type your 4-digit PIN. Your name now shows in the green **operator chip**.
- 4 To hand over, tap the chip → **Change operator**. To finish, tap **End shift**.

Why it matters: every dispatch and queue change is recorded against whoever is logged in, so the park always knows who was operating.

2 · Dispatch groups

Set the group size with **- / +** (or tap the number to type it), then tap **Dispatch group** each time you send guests in. The timer shows how long since the last dispatch and turns amber → red if you're running slow.

3 · Queue time & status

Use the **-10 / -5 / +5 / +10** buttons to set the wait shown on the entrance screen. Set the status pill to **Delayed** or **Closed** when needed — dispatching locks while delayed/closed.

If a delay is logged, a banner appears asking for an incident report. Tap **Report** to fill it in, or **No incident — minor** (then confirm) if nothing happened. See the Incidents section.

Throughput, reports & alerts

Hourly throughput

The throughput list fills automatically from your dispatches. To correct a figure, tap the small **pencil** on a row (or press & hold the row) and type the real number.

Show report

At the end of the night tap **Show Report** under the logo to record operational, technical, construction and costume notes. It's submitted with a PIN.

Alerts from management

Coloured banners appear at the top of the screen when Admin sends an alert — **info** **warning** **urgent**. Tap **x** to dismiss once read.

URGENT

Evacuate the Bunker — meet at point B

Tablet tip: on an iPad the whole panel fits on one screen — status, dispatch, queue and throughput are all visible without scrolling.

The dispatch loop, at a glance

Opening & closing safety checks

Sign-Off runs on iPads. Supervisors work through checklists for each attraction and sign them off by role with a PIN — building a full audit trail and the nightly report.

Step by step

- 1 Tap your attraction tile on the home screen.
- 2 Open a **section** (e.g. Technical) and flip each check's **green switch** as you complete it.
- 3 When all items are on, tap **Sign off section · enter PIN**.
- 4 Completed sections turn into a green **receipt** showing who signed and when.
- 5 Repeat for all sections; closing checks unlock for the end of the night.

Only the right role can sign a section. Your PIN carries your roles — if a section needs a role you don't hold, ask the right person to sign it.

End of night

Submit the show report from the attraction's screen once closing checks are done.

Managing the park

Admin is the manager's view. The tab bar gives quick access to the key areas; less-used pages live under **More**.

Tab	What you do there
Attractions	The main board — open/close, set status & hours, see the current operator on each, reorder.
Operations	Live picture per attraction: queue chart, downtime, operator timeline, throughput. Printable.
Sign-Off	Configure checklists and see sign-off progress.
Reports	Nightly show reports, exportable to A4 PDF.
Incidents	Review queue for all incident reports — a red badge shows how many await review.
Screens	Pair, name, assign and blackout the guest screens.
Alerts	Send messages to Control and the ops view.
More ▶	Attraction Details · Add Attraction · Analytics · Logs · Users

Managing operators

Each attraction card shows a pill of who's operating. Tap it to **log the operator out** or **reassign** the attraction to another PIN-holder — useful at shift changes or if someone forgets to sign out.

Setting up the guest screens

Guest-facing screens run on small Raspberry Pi computers plugged into TVs. They pair to the system with a short code — no keyboard needed at the screen.

Pairing a new screen

- 1 The Pi boots to a setup screen showing a **4-character code**.
- 2 In Admin → **Screens**, find the screen and choose what it should display from the dropdown.
- 3 The screen switches to its assigned view within seconds. Give it a name so it's easy to find later.

Screen types

Screen	Shows
TV1 / TV2	Wait-time boards & photo banners for all attractions
TV3	Tonight's show times
TV4	Rotating carousel — wait times then shows
TV5	Attraction logo montage
Queue screen	One attraction's live wait time at its entrance
Operations view	Staff command board (not guest-facing)

Blackout. Use the global blackout to switch every screen to the logo montage instantly, or blackout a **single screen** from its card. A queue screen in blackout shows just that attraction's logo.

INCIDENTS

Reporting & reviewing incidents

Any issue — a guest problem, downtime, or an injury — is logged as an incident. Everything flows into one review queue in Admin, and every report can be printed for the accident book.

Four ways a report starts

On Control

When a delay happens (or Admin asks), a banner appears. Choose **Report** to file it, or **No incident — minor** (with a confirm) if there's nothing to record. Operators can also tap **Log incident** anytime.

The form branches

Guest issue / downtime → type, location, what happened, witness.

Injury or accident → a full HSE report: injured person & contact details, nature of injury, first aid, hospital, witnesses.

RIDDOR is decided by a manager, not the operator. Injuries arrive flagged "**RIDDOR: not assessed**" — a manager sets the determination and adds the action taken & remediation during review.

Cheat sheet

Control

Start operating	Enter PIN to operate
Send guests	Set size → Dispatch group
Change wait	−10 / −5 / +5 / +10
Hand over	Chip → Change operator
Finish	Chip → End shift

Sign-Off

Do a check	Flip the green switch
Sign a section	All on → enter PIN
See who signed	Green receipt on the section

Admin

Who's operating	Operator pill on each card
Reassign / log out	Tap the operator pill
Send a message	Alerts tab
Review incidents	Incidents tab (red badge)
Print a report	Print button on the report
Blackout a screen	Screens → screen card

Remember

Nothing dispatches without an operator logged in.
Every action is recorded against them.
